# Cisco Catalyst 9117AX Series Access Points

# Contents

The Cisco® Catalyst® 9117AX Series Access Points are the next generation of enterprise access points. They are resilient, secure, and intelligent.

**Figure 1.**
Cisco Catalyst 9117AX Series

Hyperconnectivity with steady performance in demanding environments. Exponential growth of Internet of Things (IoT) devices and next-generation applications. Advanced persistent security threats. All of these require a wireless network that provides resiliency and superior connectivity, integrated security with advanced classification and containment, and hardware and software innovations to automate, secure, and simplify networks. Updating your wireless infrastructure to one that will meet these needs is paramount for today's digital business. The new generation of Cisco Catalyst 9100 Access Points, with high-performance Wi-Fi 6 (802.11ax) capabilities and innovations in RF performance, security, and analytics, enables end-to-end digitization and helps accelerate the rollout of business services by delivering beyond Wi-Fi.

The Cisco Catalyst 9117AX Series Access Points deliver several features of Wi-Fi 6 while offering high data rates.

Key features:

- Wi-Fi 6 compatible

- Three radios: 2.4 GHz (4x4), 5 GHz (8x8), and BLE

- OFDMA and MU-MIMO

- Multigigabit support

- Internal antenna

- Available with optional embedded wireless controller

The Cisco Catalyst 9117AX Series Access Points support both Orthogonal Frequency-Division Multiple Access (OFDMA) and Multiuser Multiple Input, Multiple Output (MU-MIMO), delivering more predictable performance for advanced applications and IoT. Additionally, with up to 5 Gbps with NBASE-T and IEEE 802.3bz Ethernet compatibility, the 9117AX Series can seamlessly offload network traffic without any bottlenecks. With Cisco's Multigigabit technology, you can use your existing Category 5e or 6 cabling to achieve speeds up to 5 Gbps, allowing for higher throughputs with minimum cost.

With the 9117AX Series, you can secure remote workers or the micro-office. Any Cisco Aironet or Catalyst access point can function as an OfficeExtend access point (OEAP). With an OEAP, an employee at home or in a temporary micro-office will have access to the corporate SSID and the corporate network without the need to set up a VPN or have any advanced technical know-how.

Cisco User Defined Network, a feature available in Cisco DNA Center, allows IT to give end users control of their very own wireless network partition on a shared network. End users can then remotely and securely deploy their devices on this network. Perfect for university dormitories or extended hospital stays, Cisco User Defined Network grants both device security and control, allowing each user to choose who can connect to their network. (Available second half of calendar year 2020.)

The Wi-Fi 6 readiness dashboard is a new dashboard in the Assurance menu of Cisco DNA Center. It will look through the inventory of all devices on the network and verify device, software, and client compatibility with the new Wi-Fi 6 standard. After upgrading, advanced wireless analytics will indicate performance and capacity gains as a result of the Wi-Fi 6 deployment. This is an incredible tool that will help your team define where and how the wireless network should be upgraded. It will also give you insights into the access point distribution by protocol (802.11 ac/n/abg), wireless airtime efficiency by protocol, and granular performance metrics.

**Table 1.**     Features and benefits

| Feature | Benefits |
|---|---|
| **802.11ax (Wi-Fi 6)** | The IEEE 802.11ax emerging standard, also known as High-Efficiency Wireless (HEW) or Wi-Fi 6, builds on 802.11ac. It will deliver a better experience in typical environments and more predictable performance for advanced applications such as 4K or 8K video, high-density, high-definition collaboration apps, all-wireless offices, and IoT. 802.11ax is designed to use both the 2.4-Ghz and 5-GHz bands, unlike the 802.11ac standard. |
| **802.11ac Wave 2 support** | Provides a connection rate of up to 3.5 Gbps—significantly higher than rates offered by today's high-end 802.11ac access points. |
| **OFDMA** | OFDMA-based scheduling splits the bandwidth into smaller chunks called Resource Units (RUs), which can be allocated to individual clients only in the downlink direction to reduce overhead and latency. |
| **MU-MIMO technology** | Supporting eight spatial streams, MU-MIMO enables access points to split spatial streams between client devices, to maximize throughput. |
| **Target wake time** | A new power savings mode called Target Wake Time (TWT) allows the client to stay asleep and to wake up only at prescheduled (target) times to exchange data with the AP. This offers significant energy savings for battery-operated devices, up to 3x to 4x compared to 802.11n and 802.11ac. |
| **Embedded Catalyst 9800 Wireless Controller** | The 9117AX Series Wi-Fi 6 access points are available with a built-in controller. The Cisco Embedded Wireless Controller on Catalyst 9100 Access Points provides an easy-to-deploy and manage option that does not require a physical appliance. The control resides on the access point, so there is no added footprint or complexity. And, because it uses Cisco Catalyst 9800 Series Wireless Controller code, it's easy to migrate your network as your needs grow. |
| **Multigigabit Ethernet support** | Provides uplink speeds of 5 Gbps, in addition to 100 Mbps and 1 Gbps. All speeds are supported on Category 5e cabling for an industry first, as well as 10GBASE-T (IEEE 802.3bz) cabling. |
| **Bluetooth 5.0** | Integrated Bluetooth Low Energy (BLE) 5.0 radio to enable IoT use cases such as location tracking and wayfinding. |

| Feature | Benefits |
|---------|----------|
| Apple features | Apple and Cisco have partnered to create an optimal mobile experience for iOS devices on corporate networks based on Cisco technologies. Using new features in iOS 10, in combination with the latest software and hardware from Cisco, businesses can now more effectively use their network infrastructure to deliver an enhanced user experience across all business applications.<br><br>At the center of the collaboration is a unique handshake between the Cisco WLAN and Apple devices. This handshake enables the Cisco WLAN to provide an optimal Wi-Fi roaming experience to Apple devices. Additionally, the Cisco WLAN trusts Apple devices and gives priority treatment for business-critical applications specified by the Apple device. This feature is also known as Fast Lane. |

**Note:** Features available in a future releases: Cisco Mobility Express, Target Wake Time, BSS Coloring, Downlink OFDMA

## Resilient - steady performance in demanding environments

Network infrastructure that upgrades to Wi-Fi 6, also known as 802.11ax, enables devices to get up to a 4x capacity boost to support the additional devices connected to the network as well as the data they generate. 802.11ax will offer Multigigabit performance, with seamless connectivity and higher throughput compared to the 802.11ac standard. This means you'll see your network run more smoothly. With support for BSS coloring, the new standard eases high- density environments by allowing simultaneous transmissions, ultimately increasing network capacity, customer interactions, and value-add services.

Wi-Fi 6, with better coordination of transit time to and from devices, will also bring about a reduction in latency and a greater reliability, allowing for hundreds of devices per access point. This allows for IoT devices to be reliably deployed at scale. And an overall improved user experience will be seen as well, as 802.11ax will improve the battery life of devices such as smartphones, tablets, and IoT devices when compared to prior standards. For more details about 802.11ax, please check Cisco's technical white paper on 802.11ax.

## Secure infrastructure

**Trustworthy systems built with Cisco Trust Anchor Technologies** provide a highly secure foundation for Cisco products. With the Cisco Catalyst 9100 Access Points, these technologies enable hardware and software authenticity assurance for supply chain trust and strong mitigation against man-in-the-middle attacks that compromise software and firmware. Trust Anchor capabilities include:

- **Image signing:** Cryptographically signed images provide assurance that the firmware, BIOS, and other software are authentic and unmodified. As the system boots, the system's software signatures are checked for integrity.

- **Secure Boot:** Cisco Secure Boot technology anchors the boot sequence chain of trust to immutable hardware, mitigating threats against a system's foundational state and the software that is to be loaded, regardless of a user's privilege level. It provides layered protection against the persistence of illicitly modified firmware.

- **Cisco Trust Anchor module:** A tamper-resistant, strong cryptographic, single-chip solution provides hardware authenticity assurance to uniquely identify the product so that its origin can be confirmed to Cisco. This provides assurance that the product is genuine.

## Intelligence for proactive insights and analytics

With multi-RF support paramount for IoT devices and expanded ecosystem partnerships, the Cisco Catalyst 9100 portfolio provides unprecedented visibility from mobile devices on Cisco networks. Enabling digitization with Cisco DNA, the Cisco Catalyst 9100 portfolio offers further Cisco RF innovations for securing air with real-time telemetry, guided remediation, and optimization for Wi-Fi and IoT networks. The Cisco Catalyst 9100 Access Points can support advanced spectrum intelligence, device analytics, and network assurance.

## Aesthetically redesigned for next-generation enterprise

The Cisco Catalyst 9100 Access Points are built from the ground up, with a new aerodynamic look and smooth finish, integrating RF excellence and next-generation technologies to provide a best-in-class wireless experience without compromise. While packing several high-performance features, the hardware is redesigned to deliver higher efficiencies in a more compact form factor to make visually appealing Wi-Fi deployments commonplace.

## Cisco DNA support

Pairing the Cisco Catalyst 9117AX Series Access Points with the Cisco Digital Network Architecture (Cisco DNA) allows for a total network transformation. Cisco DNA allows you to truly understand your network with real-time analytics, quickly detect and contain security threats, and easily provide networkwide consistency through automation and virtualization.

Cisco DNA with Software-Defined Access (SD-Access) is the network fabric that powers business. It is an open and extensible, software-driven architecture that accelerates and simplifies your enterprise network operations. The programmable architecture frees your IT staff from time-consuming, repetitive network configuration tasks so they can focus instead on innovation that positively transforms your business. By decoupling network functions from the hardware, you can build and manage your entire wired and wireless network from a single user interface. SD-Access enables policy-based automation from edge to cloud with foundational capabilities. These include:

- Simplified device deployment
- Unified management of wired and wireless networks
- Network virtualization and segmentation
- Group-based policies
- Context-based analytics

The Cisco Catalyst 9117AX Series Access Points support Software-Defined Access, Cisco's leading enterprise architecture.

Working together, the Cisco Catalyst 9117AX Series and Cisco DNA offer such features as:

- Cisco DNA Spaces
- Cisco Identity Services Engine
- Cisco DNA Analytics and Assurance
- And much more

The result? Your network stays relevant, becomes digital ready, and is the lifeblood of your organization.

# Product specifications

**Table 2.** Specifications

| Item | Specification |
|---|---|
| **Part numbers** | **Cisco Catalyst 9117AXI Access Point: Indoor environments, with internal antennas**<br><br>● C9117AXI-x: Cisco Catalyst 9117AX<br><br>**Cisco Catalyst 9117AXI Access Point: Indoor environments, with internal antennas, with embedded wireless controller**<br><br>● C9117AXI-EWC-x: Cisco Catalyst 9117AX<br><br>**Regulatory domains: (x = regulatory domain)**<br><br>Customers are responsible for verifying approval for use in their individual countries. To verify approval and to identify the regulatory domain that corresponds to a particular country, visit https://www.cisco.com/go/aironet/compliance.<br><br>Not all regulatory domains have been approved. As they are approved, the part numbers will be available on the Global Price List.<br><br>**Cisco Wireless LAN Services**<br><br>● AS-WLAN-CNSLT: Cisco Wireless LAN Network Planning and Design Service<br>● AS-WLAN-CNSLT: Cisco Wireless LAN 802.11n Migration Service<br>● AS-WLAN-CNSLT: Cisco Wireless LAN Performance and Security Assessment Service |
| **Software** | ● Cisco Unified Wireless Network Software Release 8.9 or later<br>● Cisco IOS® XE Software Release 16.11 or later |
| **Supported wireless LAN controllers** | ● Cisco Catalyst 9800 Series Wireless Controllers<br>● Cisco 3500, 5520, and 8540 Series Wireless Controllers, and Cisco Virtual Wireless Controller |
| **802.11n version 2.0 (and related) capabilities** | ● 8x8 MIMO with four spatial streams for 5-GHz band<br>● 4x4 MIMO with four spatial streams for 2.4-GHz band<br>● Maximal Ratio Combining (MRC)<br>● 20- and 40-MHz channels<br>● PHY data rates up to 600 Mbps (40 MHz with 5 GHz)<br>● Packet aggregation: A-MPDU (transmit and receive), A-MSDU (transmit and receive)<br>● Cyclic Shift Diversity (CSD) support |
| **802.11ac** | ● 8x8 downlink MU-MIMO with eight spatial streams<br>● MRC<br>● 802.11ac beamforming<br>● 20-, 40-, 80, and 160-MHz channels<br>● PHY data rates up to 3.5 Gbps at 5 GHz<br>● Packet aggregation: A-MPDU (transmit and receive), A-MSDU (transmit and receive)<br>● CSD support<br>● 160 MHz support only on 4-spatial stream |

| Item | Specification |
|---|---|
| **802.11ax** | • 8x8 MIMO with eight spatial streams for 5-GHz band<br>• 4x4 MIMO with four spatial streams for 2.4-GHz band<br>• Downlink OFDMA<br>• TWT<br>• MRC<br>• 802.11ax beamforming<br>• 20-, 40-, 80, and 160-MHz channels<br>• PHY data rates up to 5 Gbps at 5 GHz<br>• Packet aggregation: A-MPDU (transmit and receive), A-MSDU (transmit and receive)<br>• CSD support |
| **Integrated antenna** | • 2.4 GHz, peak gain 4 dBi, internal antenna, omnidirectional in azimuth<br>• 5 GHz, peak gain 6 dBi, internal antenna, omnidirectional in azimuth |
| **Interfaces** | • 1x 100, 1000, 2500, 5000 Multigigabit Ethernet (RJ-45) – IEEE 802.3bz<br>• Management console port (RJ-45)<br>• USB 2.0 with up to 4.5W (enabled via future software) |
| **Indicators** | • Status LED indicates boot loader status, association status, operating status, boot loader warnings, and boot loader errors |
| **Dimensions (W x L x H)** | • Access point (without mounting bracket and mounting features): 8.70 x 8.70 x 1.94 in. (22 x 22 x 4.93 cm)<br>• Access point (without mounting bracket): 8.70 x 8.70 x 2.19 in. (22 x 22 x 5.56 cm) |
| **Weight** | • 3.02 lb (1.4 kg) |
| **Input power requirements** | • 802.3at Power over Ethernet Plus (PoE+), 802.3bt Cisco Universal PoE (Cisco UPOE+, Cisco UPOE®)<br>• Cisco power injector, AIR-PWRINJ6=<br>• 802.3af PoE<br>• Cisco power injector, AIR-PWRINJ5= (Note: This injector supports only 802.3af)<br><br>Note: When 802.3af PoE is the source of power, both 2.4-GHz and 5-GHz radios will be reduced to 2x2 and Ethernet downgraded to 2.5 Gbps; in addition, the USB port will be off. |
| **Power draw** | 802.3bt Cisco UPOE+ Cisco UPOE Full Feature |

**Power draw** (continued)

802.3bt Cisco UPOE+ Cisco UPOE Full Feature

| Power source | Power type | 2.4-GHz radio | 5-GHz radio | Link speed | USB | LLDP |
|---|---|---|---|---|---|---|
| 802.3bt Cisco UPOE+, Cisco UPOE | PoE | 4x4 | 8x8 | 5 Gbps | Y | 28.9W |

802.3at Full Feature*

| Power source | Power type | 2.4-GHz radio | 5-GHz radio | Link speed | USB | LLDP |

---

[1] MCS Index: The Modulation and Coding Scheme (MCS) index determines the number of spatial streams, the modulation, the coding rate, and data rate values.

[2] GI: A guard interval (GI) between symbols helps receivers overcome the effects of multipath delay spreads.

## Licensing and software packaging

The Cisco Catalyst 9100 Access Points require mandatory Smart Licensing. This provides ease of use for Cisco DNA license management, consumption, and tracking. The Cisco Catalyst 9100 uses packaging that includes vastly simplified base network packages (Network Essentials and Network Advantage) and term-based software packages (Cisco DNA Essentials, Cisco DNA Advantage) as add-ons. The Cisco DNA packages, in addition to on-box capabilities, also unlock additional functionality in Cisco DNA Center, enabling controller-based software-defined automation and assurance in your network.

The Cisco Catalyst 9100 Access Points can support three types of Cisco DNA licenses: Cisco DNA Essentials, Cisco DNA Advantage, and Cisco DNA Premier. The Cisco DNA licenses provide Cisco innovations on the access point. The Cisco DNA license also includes the Network Essentials and Network Advantage licensing options, which cover wireless fundamentals such as 802.1X authentication, Quality of Service (QoS), and Plug and Play (PnP); telemetry and visibility, and single sign-on (SSO), as well as security controls. These Network Essentials and Network Advantage components are perpetual and valid for the life of the access point. Cisco DNA subscription licenses have to be purchased for a 3-, 5-, or 7-year subscription term. However, upon expiration of the Cisco DNA license, the Cisco DNA features will expire, whereas the Network Essentials and Network Advantage features will remain.

Note that it is not required to deploy Cisco DNA Center just to use one of the above packages. Refer to https://www.cisco.com/c/dam/en/us/products/collateral/software/one-wireless-subscription/q-and-a-c67-739601.pdf for additional details about the Essentials and Advantage packages.

For information about feature support, please refer to the Cisco Catalyst 9100 Release Notes.

## Managing licenses with Smart Accounts

Creating Smart Accounts by using the Cisco Smart Software Manager (CSSM) enables you to order devices and licensing packages and also manage your software licenses from a centralized website. You can set up the Smart Account to receive daily email alerts and to be notified of expiring add-on licenses that you want to renew. A Smart Account is mandatory for Cisco Catalyst 9100 Access Points. For more information on Smart Account refer to https://www.cisco.com/go/smartaccounts.

In order to connect any access points to the **controller**, Cisco DNA software subscriptions are required. To be entitled to connect to a Cisco Catalyst 9800 Series Wireless Controller, the access point requires a Cisco DNA subscription license.
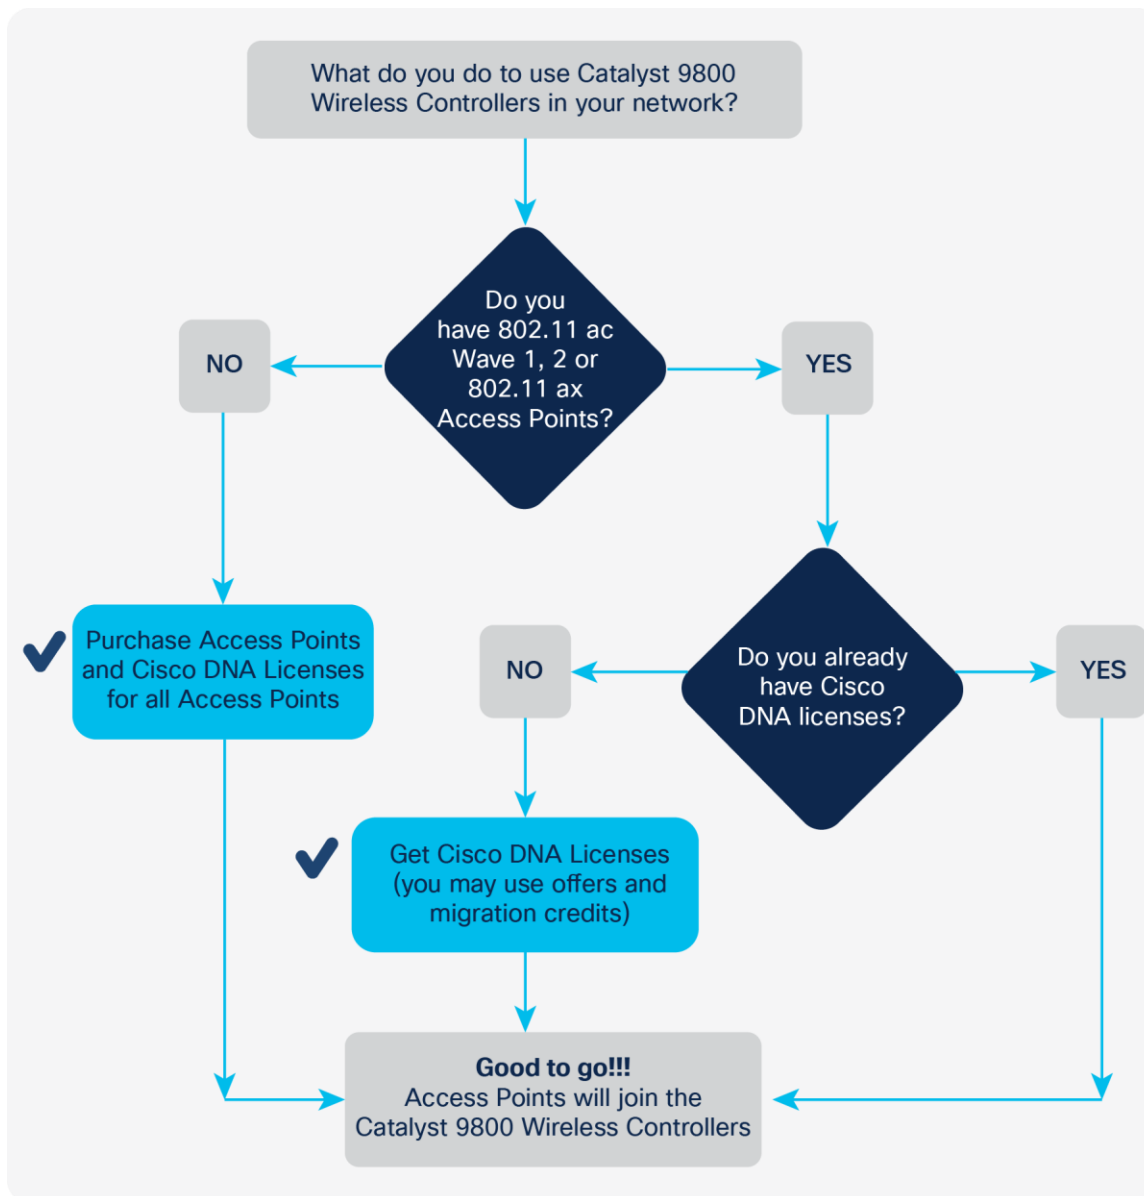

**Figure 3.**
Determining license requirements for access points connecting to Cisco Catalyst 9800 Series Wireless Controllers

The APs connecting to Catalyst 9800 have new and simplified software subscription packages.

They can support 3 tiers of Cisco DNA software: Cisco DNA Essentials, Cisco DNA Advantage and Cisco DNA Premier.

Cisco DNA software subscriptions provide Cisco innovations on the AP. They also include perpetual Network Essentials and Network Advantage licensing options which cover wireless fundamentals such as 802.1x authentication, QoS, PnP etc, telemetry and visibility, SSO, as well as security controls.

Cisco DNA subscription software has to be purchased for a 3-, 5-, or 7-year subscription term. However. upon expiry, Cisco DNA features will expire, whereas Network Essentials and Network Advantage features will remain.

For the full feature list of Cisco DNA Software, including the perpetual Network Essentials and Network Advantage, please see the feature matrix:

https://www.cisco.com/c/m/en_us/products/software/dna-subscription-wireless/en-sw-sub-matrix-wireless.html?oid=porew018984

Two modes of licensing are available:

- Smart Licensing (SL) simplifies and adds flexibility to licensing. It is:

  ○ Simple: Procure, deploy, and manage licenses easily. Devices self-register, removing the need for Product Activation Keys (PAKs).

  ○ Flexible: Pool license entitlements in a single account. Move licenses freely through the network, wherever you need them.

  ○ Smart: Manage your license deployments with real-time visibility into ownership and consumption.

- Specific License Reservation (SLR) is a feature used in highly secure networks. It provides a method for customers to deploy a software license on a device (product instance) without communicating usage information to Cisco. There is no communication with Cisco or a satellite. The licenses are reserved for every controller. It is node-based licensing.

Four levels of license are supported on the **Cisco Catalyst 9800 Series Wireless Controllers.** The controllers can be configured to function at any one of the four levels.

- Cisco DNA Essentials: At this level the Cisco DNA Essentials feature set will be supported.

- Cisco DNA Advantage: At this level the Cisco DNA Advantage feature set will be supported.

- NE: At this level the Network Essentials feature set will be supported.

- NA: At this level the Network Advantage feature set will be supported.

Cisco DNA Premier is a bundle with ISE licenses and Cisco DNA Spaces Extend. It is inclusive of Cisco DNA Advantage, so at this level the Cisco DNA Advantage feature set will be supported. For customers who purchase Cisco DNA Essentials, Network Essentials will be supported and will continue to function even after term expiration. And for customers who purchase Cisco DNA Advantage or Cisco DNA Premier, Network Advantage will be supported and will continue to function even after term expiration.

Initial bootup of the controller will be at the Cisco DNA Advantage level.

For questions, contact the Cisco Catalyst 9800 Series Wireless Controllers Licensing mailer group at ask-catalyst9800licensing

## Warranty information

The Cisco Catalyst 9117AX Series Access Points come with a limited lifetime warranty that provides full warranty coverage of the hardware for as long as the original end user continues to own or use the product. The warranty includes 10-day advance hardware replacement and ensures that software media are defect-free for 90 days. For more details, visit https://www.cisco.com/go/warranty.

# Cisco environmental sustainability

Information about Cisco's environmental sustainability policies and initiatives for our products, solutions, operations, and extended operations or supply chain is provided in the "Environment Sustainability" section of Cisco's Corporate Social Responsibility (CSR) Report.

Reference links to information about key environmental sustainability topics (mentioned in the "Environment Sustainability" section of the CSR Report) are provided in Table 3.

**Table 3.**     Links to sustainability information

| Sustainability topic | Reference |
| --- | --- |
| Information on product material content laws and regulations | Materials |
| Information on electronic waste laws and regulations, including products, batteries, and packaging | WEEE compliance |
| Sustainability inquiries | Contact: csr_inquiries@cisco.com |

Cisco makes the packaging data available for informational purposes only. It may not reflect the most current legal developments, and Cisco does not represent, warrant, or guarantee that it is complete, accurate, or up to date. This information is subject to change without notice.

# Cisco Services

With Cisco Services, you can achieve infrastructure excellence faster with less risk. From initial WLAN readiness assessment to implementation, full solution support and in-depth training, our services for the Cisco Catalyst 9117AX Series Access Points provide expert guidance to help you successfully plan, deploy, manage, and support your new access points. With unmatched networking expertise, best practices, and innovative tools, Cisco Services can help you reduce overall upgrade, refresh, and migration costs as you introduce new hardware, software, and protocols into the network. With a comprehensive lifecycle of services, Cisco experts will help you minimize disruption and improve operational efficiency to extract maximum value from your Cisco DNA ready infrastructure.

# Cisco Capital

## Flexible payment solutions to help you achieve your objectives

Cisco Capital® makes it easier to get the right technology to achieve your objectives, enable business transformation, and stay competitive. We can help you reduce the total cost of ownership, conserve capital, and accelerate growth. In more than 100 countries, our flexible payment solutions can help you acquire hardware, software, services and complementary third-party equipment in easy, predictable payments. Learn more.
